

RDG Service Assurance

Automation Execution Summary - Periodic Collator

User Manual v1.0 | June 2026

RDG Quality Assurance - Service Assurance Team

1. Overview

The RDG Service Assurance Automation Execution Summary Periodic Collator is a Python-based tool that collects automated test execution reports from multiple RDG systems and consolidates them into a single formatted Excel workbook. It is designed to be run periodically (e.g. monthly) to produce a standardised summary for the Service Assurance team.

The output workbook contains three worksheets:

- Executive Summary - KPI tiles (total tests, passed, failed, other, overall pass rate) plus a consolidated table with one row per core system.
- Raw Data - Full detail with one row per individual test report run, grouped by system with batch dividers.
- Pivot Chart - Clustered bar chart of Total / Passed / Failed / Other by core system.

2. Prerequisites

Software Requirements

- Python 3.9 or higher (<https://www.python.org>)
- Git (<https://git-scm.com>)
- pip (included with Python 3.9+)

Python Dependencies

All dependencies are listed in requirements.txt:

```
openpyxl>=3.1.0
beautifulsoup4>=4.12.0
lxml>=4.9.0
fpdf2>=2.7.0
```

3. Installation

Step 1 - Clone the Repository

```
git clone https://github.com/YOUR_ORG/RDG-ServiceAssurance-AutomationExecutionSummary-PeriodicCollator.git
cd RDG-ServiceAssurance-AutomationExecutionSummary-PeriodicCollator
```

Step 2 - Install Python Dependencies

```
pip install -r requirements.txt
```

Step 3 - Verify Installation

```
python collator/run_collator.py --help
```

You should see the help output listing available arguments.

4. Input Files

Supported Report Types

Place all report files in the data/input/ directory before running the collator.

Report Type	Extension	System(s)	Auto-Parsed?
Playwright Dashboard	.html	Railcard RQA-555, PA Systems	Yes
Playwright HTML	.html	PA Retail TOC Portal, NR Website	Yes
Robot Framework HTML	.html	National Rail App iOS & Android	Yes
Allure / JUnit HTML	.html	RDM (Reference Data Management)	Yes
ReadyAPI Screenshots	.png/.PNG	AWS Gateway, MuleSoft, Railcard API	Manual

ReadyAPI Screenshots (Manual Entry)

ReadyAPI results are provided as PNG screenshots and cannot be machine-parsed. To include these results, edit collator/parse_screenshots.py and add an entry to the SCREENSHOT_DATA list for each screenshot:

```
{
  "system": "AWS Gateway API",
  "release": "Full Suite (31-Mar-2026)",
  "run_date": "31-Mar-2026",
  "tool": "ReadyAPI",
  "total": 168,
  "passed": 168,
  "failed": 0,
  "other": 0,
  "notes": "5 suites. All passed.",
}
```

```
},
```

Required fields: system (must match system_map.py), release (label), run_date, tool, total, passed, failed, other, notes.

5. Running the Collator

Basic Usage

```
python collator/run_collator.py
```

Scans data/input/ for HTML files, merges screenshot data, saves output to data/output/.

Command-Line Arguments

Argument	Default	Description
--input <path>	data/input	Directory containing HTML report files
--output <path>	data/output	Directory for the output Excel workbook
--no-screenshots	off	Skip manually entered ReadyAPI screenshot data
--help		Show help and exit

Custom Paths Example

```
python collator/run_collator.py --input /reports/june2026 --output /reports/output
```

HTML Only (Skip Screenshots)

```
python collator/run_collator.py --no-screenshots
```

6. Output Workbook

Saved to data/output/ with filename: RDG - Service Assurance - Automation Summary - v1.0 - YYYYMMDD-HHMM.xlsx

Worksheet 1: Executive Summary

- KPI tiles: Total Tests, Passed, Failed, Other
- Overall Pass Rate tile (green >= 80%, red otherwise)
- Consolidated table - one row per core system
- Grand Total row
- Colour coding: green = pass, red = fail, amber = other/flaky

Worksheet 2: Raw Data

- One row per test report run
- Grouped by core system with blue section dividers
- Columns: System, Release, Run Date, Tool, Total, Passed, Failed, Other, Notes

- Frozen header at row 4

Worksheet 3: Pivot Chart

- Consolidated one-row-per-system table
- Clustered bar chart: Total / Passed / Failed / Other per core system
- Pass Rate % column with colour coding

7. System Consolidation Map

Multiple granular system names are merged into single rows in the Executive Summary and Pivot Chart. Raw Data retains all granular names. Edit collator/system_map.py to add or change mappings.

Granular System Name	Consolidated Label
AWS Gateway API	AWS Gateway API
MuleSoft API Test Suite	MuleSoft API Test Suite
RDM (Reference Data Management)	RDM (Reference Data Management)
PA - Retail TOC Portal	PA Systems (combined)
Enhanced Electronic Handover (EEH)	PA Systems (combined)
PA - Request Assistance via Retail	PA Systems (combined)
PA - Manage Booking	PA Systems (combined)
Staff Account Management	PA Systems (combined)
National Rail Website (Live Trains)	National Rail Website (Live Trains)
National Rail App - iOS	National Rail App (iOS & Android)
National Rail App - Android	National Rail App (iOS & Android)
Railcard (RQA-555) - BAU	Railcard (RQA-555)
Railcard (RQA-555) - Checks	Railcard (RQA-555)
Railcard (RQA-555) - Comprehensive	Railcard (RQA-555)
Railcard API (Final)	Railcard API (Final)

8. Adding a New System

- Step 1: Add the system raw name and consolidated label to SYSTEM_MAP in collator/system_map.py
- Step 2: If the consolidated label is new, add it to SYSTEM_ORDER in system_map.py
- Step 3: For HTML reports - verify auto_parse() in parse_reports.py detects it; add a parser if needed
- Step 4: For screenshots - add entries to SCREENSHOT_DATA in parse_screenshots.py
- Step 5: Run the collator and verify the new system appears in all three worksheets

9. Troubleshooting

Issue	Likely Cause	Resolution
File not parsed	Auto-detection failed	Add specific parser in parse_reports.py
System missing from pivot	Name not in SYSTEM_MAP	Update system_map.py
Wrong totals	Regex mismatch in parser	Inspect HTML and update regex

ModuleNotFoundError	Dependencies not installed	Run: pip install -r requirements.txt
Empty workbook	No files in data/input/	Check input directory path
Screenshots not included	parse_screenshots.py not updated	Edit SCREENSHOT_DATA list

10. Git Workflow

Pull Latest Changes

```
git pull origin main
```

Add New Data and Commit

```
# 1. Add HTML reports to data/input/
# 2. Update parse_screenshots.py with new screenshot data
# 3. Run the collator
python collator/run_collator.py

# 4. Commit updated code
git add collator/parse_screenshots.py
git commit -m "Add July 2026 screenshot data"
git push origin main
```

Create a Feature Branch

```
git checkout -b feature/add-new-system
# Make changes...
git add .
git commit -m "Add new system support"
git push origin feature/add-new-system
# Then open a Pull Request on GitHub
```
